The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.			
1. \boxtimes This communication is responsive to <u>the Amendment filed</u>	on 09/20/2004.		
2. The allowed claim(s) is/are <u>1 and 3-13</u> .			
3. The drawings filed on <u>06 February 2001</u> are accepted by the Examiner.			
 4. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b)

Examiner's Amendment

- 1. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment maybe filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 2. Pursuant to MPEP 606.01, the title has been changed to read:
- -- METHOD AND SYSTEM FOR ACTIVE PUBLISHING USING A SLAVE ASSIGNED TO A MASTER SYSTEM TO DETECT, EVALUATE AND MAKE THE MESSAGE AVAILABLE TO AN APPLICATION ASSOCIATED WITH THE SLAVE --
- 3. The following is an examiner's statement of reasons for allowance:

In interpreting the claims, in light of the specification and the applicant's arguments filed on 09/20/2004, the Examiner finds the claimed invention to be patentably distinct from the prior art of record.

Ruckley al. (US 6,360,277), teach PROFIBUS specifying the technical and functional characteristics of a serial Fieldbus (master/slave) system with which decentralized digital controllers can be networked together from the field level to the cell lever, wherein a Master (active station) can send messages without an external request and a Slave (passive station) can only acknowledge received messages or send messages to the master when requested to do so (Ruckley, C3: L45-61).

Art Unit: 2141

Kalkunte et al. (US 5,351,243), teach a method and system for monitoring packets on a communications network, wherein a packet is detected traveling on communications pathway 110 by adapter 132 and based on the addressing information in the packet, adapter 132 determines whether or not host computer 130 should receive the packet (Kalkunte, Fig. 2 and C3: L47-64).

However, the prior art of record fails to teach or suggest individually or in combination that a communication method and system for use with a decentralized bus system to which a plurality of communication participants are connected, including a first master assigned to a first master system, and a second master and a slave assigned to a second master system, the second master system being associated with at least one application and being provided with filter table containing data entries, comprising: forming a message having a header and message data, including providing data entries in the header which correspond to data entries in the filter table; transmitting the message from the first master over the bus system; detecting the message in the second master system; evaluating at least some of the header data, in the second master system, including comparing the header data entries with the data entries of the filter table; and making the message data available to the application, when the header data entries match the data entries of the filter table, wherein the application is associated with the slave and the filter table is provided for the slave, and wherein said detecting, evaluating, and making steps are performed by the slave as set forth in independent claims 1 and 6-7. Claims 1 and 3-13 are allowed because of the combination of other limitations and the limitation listed above.

Application/Control Number: 09/776,715

Art Unit: 2141

The examiner finds the Applicant's arguments on pages 10-11 of the Remarks filed on 09/20/2004 to be persuasive. The applicant argued in substance that the combination of prior art of records fail to disclose the features of the invention including the possibility of communication from a first master system to a slave of a second master system and detecting, evaluating then making the message data available to the application, when the header data entries match the data entries of the filter table, wherein the application is associated with the slave and the filter table is provided for the slave, and wherein said detecting, evaluating, and making steps are performed by the slave, as claimed in the invention to optimize communication in a field bus system and between the communication participants connected to the field bus system, while
